Music Genome Project

Rymer Popovich

- **How is the data collected?**

The data is collected by a team of trained musicologists who have been listening to music for decades to create personalized music plans for customers.

- **How is it used?**

The result of the music genome project is a personalized listening experience filled with old favorites and new discoveries.

- **What artist did you pick and what were the songs?**

I chose Dylan Gossett and the songs were Coal, Heading South, Bitter Winds, Something in the Orange, and Lone Ole Cowboy

- **What are the categories/musical style being used to classify the songs that were played?**

The style of music is Country and folk.

- **What clues do these categories provide about the database structure being used?**

There is definitely an attribute that categorizes songs by genre. By clicking play on Dylan Gossett radio, it strictly plays country music.

- **Do you like songs?**

Yes I really enjoy music and I really enjoy Dylan Gossett's music

- **Would you put these songs together in a playlist?**

I already have all of these five songs in one of my country playlists.
